IndigoVision

Dell and IndigoVision: Video Surveillance Solutions

A partnership for video surveillance solutions that make people feel safe.

- **Always ahead of the game:**
Reliable live video monitoring with ultra low latency
- **Fast Reaction Times:**
Clear presentation of incidents and immediate ability to act accordingly
- **Secure Storage:**
Encrypted and tamper proof recordings, stored for your relevant retention time
- **Scalable system setup:**
Based on our distributed network architecture there is no limit to the size of your system and no single point of failure

IndigoVision has over 10,000 installations in over 20 market sectors including; education, government, health, hospitality, industrial, major events, mining, petrochemicals, ports, rail, residential, retail and traffic.

Our job is not just providing the best equipment in surveillance security business. It's keeping people and their property safe. Our system lets you monitor and record thousands of cameras, from anywhere, at the same time. Miss nothing.

The Solution

Control Center: How we make Security Managers feel more secure.

Your job used to be relatively simple.

Catch the bad guys on camera and keep your territory physically secure.

Protect your place, protect your people.

But today the things that can keep you from a good night's sleep have grown—in complexity as well as numbers.

Today you need to maintain cyber security, protect your staff from threats from every corner and ensure and manage all events with minimal interruption to your operation.

It can keep you up at night. Suddenly managing security means a lot more than catching bad guys with cameras on video. You need back-up.

Staying safe means always staying in control.

IndigoVision's Control Center is a fully integrated user interface for managing video, access control and alarms. It puts everything in your territory at your fingertips.

Easy to install and intuitive to operate, Control Center gives you sight, sound and oversight of all cameras, from 1 to 100,000.

See everything, hear everything, track everything.

Map-based Monitoring lets you navigate across cameras, while Pursuit Mode instantly follows any moving object from one camera to the next. You can respond to any event with fast forensic search.

Is your business expanding? Control Center expands with it. Unrestricted license allows unlimited installations, cameras or screens. Add cameras and consoles where you need them.

An Open and integrated network is the safest way to go.

IndigoVision's unique Distributed Network Architecture removes the need for a central server – so no single point of failure, greater resilience, dramatically reduced latency and no network bottlenecks.

You're on the move. So are we.

Mobile Center™ extends surveillance beyond the control room. Security personnel can monitor their system remotely from any location. Do you have an IOS or Android smartphone? Then wherever you are, you are in control.

Get safe. Stay safe. Feel safe.

IndigoVision Control Centers are used in over 10,000 sites worldwide.

From airports to police forces to casinos to warehouses to neighborhoods or whole cities; we're a Security Manager's best back-up.

And we back-up everything we sell. If you have a problem we make it our problem. We want you to feel more than just happy and confident when you choose IndigoVision.

We want you to feel safe.

Cameras and Encoders

From IP Encoders to a complete range of High Resolution Megapixel Video Cameras: we've got your number.

Whether you need to convert your current analogue cameras to IP, or deploy High Definition IP cameras, IndigoVision has the best, the most complete IP video security solution.

We've been developing IP video solutions since 1994 to provide world class hardware for the security market. Trusted in over 10,000 installations worldwide, IndigoVision's cameras are renowned for reliability and innovation.

Think of our NVRs as digital bodyguards.

Bodyguards who never leave you unprotected.

An IndigoVision Network Video Recorder never take a day off, never has a nap, never stops for a coffee break. It's always connected and focused on keeping you safe.

Unlike DVRs, it doesn't encode or decode. It leaves that to the cameras and management software.

It keeps its eye on the ball and that ball is to protect you with full-frame rate HD video recordings from every camera it's connected to.

Our Bodyguards are armed to keep you safe.

Each video frame is digitally watermarked as it's recorded and exported. Tampering can be detected at any point in the evidence chain.

With automatic redundancy and failover, a second NVR can set to takeover recording if a primary NVR ever fails. Automatically. No user intervention needed.

Or you can double your protection by setting a second NVR to record the same video in parallel.

IndigoVision supports all major cameras. But working in harness with our own market leading cameras and Control

Center, the world's most advanced video management software, these bodyguards become brainier and brawnier.

To demonstrate the benefits of software that is intrinsically part of the hardware, pick up an iPhone. "It Just Works".

The same with IndigoVision, software that's intrinsically part of the hardware. You get end-to-end benefits like a system that's future-proofed for a guaranteed 10 years. Our **Distributed Network Architecture** means no management servers so no single point of failure. You also get easy scalability. More cameras? Slap them in wherever you need them. Need more recorders: add them.

Dell Platforms

IndigoVision Control Center software is tested and approved to work on Dell Optiplex Desktop and Dell Precision Mobile and Fixed Workstations

About IndigoVision

Others make cameras. We make people safe. The purpose of a security system is to make you safe and feel safe. That includes your person, business, property and budget. We design your system end-to-end, with no single point of failure, so it's reliable. We design it with Distributed Network Architecture so it's flexible. Add any number of cameras and work stations effortlessly and we make it smart, so your old analogue cameras will migrate to IP and work with our HD cameras. You can integrate other HD cameras where and when you need them or other manufacturers' security systems using our Software Development Kit, such as Access Control, Communication Systems and Perimeter Detection. A global support team back it all up so your problem is our problem. That's when you discover that safe is a wonderful feeling.

The Dell Technology Partner Program

IndigoVision is a Dell Technology Partner and our video surveillance solution is certified by Dell to run on the Dell platforms specified in the above technical overview.

The [Dell Technology Partner Program](#) is a multi-tier program that includes ISVs, IHVs and Solution Providers. This global program helps partners build innovative and competitive business solutions using Dell platforms. Program resources keep customer costs low and helps to sustain competitiveness.

The program has a structured and streamlined process that combines technology and business strategies with Dell Solution Center expertise to onboard and test partner products on Dell platforms. This testing process helps ensure that products have met the technical requirements to perform well on Dell platforms.
